

TRANSFER VALVE INSTALLATION INSTRUCTIONS

Important: Read all instructions before beginning installation.

The transfer valve can be mounted horizontally on a bath rim or platform or vertically on a wall. Make sure that the mounting location allows space for the valve body and pipe connections.

1. After determining the mounting location of the transfer valve, drill a 13/16" diameter hole through the surface. Caulk and assemble as shown in illustration A for Optica™ style handles or Figure B for lever handle.

Note: Handle kits are not included with this valve and must be purchased as an option.

CAUTION

Since plumbing fittings may contribute detectable amounts of lead to water, the following notice is required by California law (Proposition 65). "This product contains a chemical known to the State of California to cause birth defects or reproductive harm." In normal use, any lead exposure can be minimized by allowing the water to run free for several seconds before drinking.

Proper Installation of the valve and compliance with local codes is the responsibility of the installer. Jacuzzi Whirlpool Bath does not warrant connections of water supply fittings and piping, fill systems, or drain/overflow systems. Nor is it responsible for damage to the bath (or spa) which occurs during any installation procedure.
